

Export, share and view your cases

Anytime, anywhere, and anyway you want

NemoBox is a simple and intuitive web service that allows the dentist to export, share or visualize clinical records such as photographs, radiographs, 3D STL files, DICOM, etc.

Access to clinical records in any device, at anytime, anywhere and by any user.

Visualization of clinical records on any device, at anytime, anywhere and by any user.

NemoBox is a tool that allows you to share clinical information with other doctors, laboratories or patients, increasing communication with them. Being a web page, it is not necessary to install anything on the device. Wherever you are, visualize your cases. NemoBox is a multiplatform service accessible from any computer, tablet, Smartphone or SmartTV, for any user regardless of where they are.

You can Access your patient's clinical records for up to 30 days with **NemoBox**. This new service is integrated into the **NemoStudio Suite**, the multidisciplinary platform that introduces your office to the new digital era.

BENEFITS

Export in a few clicks

Digital platform that allows to export in a single site all your digital cases easily.

Universal display

Cloud service with maximum availability and real-time accessible connection from any device.

Share express

Web platform that allows sharing cases between different disciplines or with dental laboratories saving time and helping doctors with multidisciplinary treatments.

Produce greater confidence

Great patient's communication tool. Show them their customized cases, evolutions, and interact with patients by making them a participant. It improves the patient's experience and facilitates their decision in accepting a treatment plan.

CHARACTERISTICS (FEATURES)

- Export patient records up to 30 days to share with other doctors, radiology centers or laboratories
- Store cases and patients' files: photographs, x-rays, 3D STL models, DICOM, etc.
- Share photographs, x-rays, 3D STL models, DICOM using intuitive icons
- Visualize treatment plans with final results: digital smile design, animation with the orthodontics setup, 3D treatment planning for braces or indirect bonding
- View individual photograph or series of photographs automatically
- Calibrate, take measurements, and orient multiple photographs (wizard)
